## THE INTRO

Again this month we have tried to improve the Newsletter. A form of Checksum is now used in the Listing of programs to help with typing errors that insist on occurring when programs are typed. I hope you folks will use the system and I am willing to receive any constructive feed-back. More of this on the next page.

The programs of the month are WORLD MAP and SKI. WORLD MAP explains itself. But a quick note on SKI. In this game you are on a SLALOM and must guide your skier through the flags until you reach the end. A lot of fun for everyone.

A press release I thought you might like to see is reproduced below from SV-ACCESS.

"Spectravideo Inc., manufacturer and marketer of personal computer systems, peripherals and accessories, announced that Bondwell Holding Ltd has acquired the controlling interest of the New York-based company."

"Bondwell is the current owner of 16 percent of Spectravideo stock, and the major supplier of products to the company. Under the terms of acquisition, Bondwell has undertaken to arrange financing for Spectravideo's future operations. In addition, Spectravideo will restructure the company's debt with the assistance of Bondwell through an agreement concluded with the company's unsecured creditors' committee."

"In conjunction with Bondwell assuming control of Spectravideo, the company has been relocated to California. Bondwell's acquisition of Spectravideo will consolidate and strengthen its position as an international manufacturer and marketer of computer products. Besides the Spectravideo line, which caters for the home applications market, it has recently introduced the Bondwell line of business computing systems worldwide."

So have fun and see you all next month.....

## IT WILL WORK!!!!

By The Ed.

The most common complaint received by me about the NEWSLETTER is the following. "I TYPED THE PROGRAM IN AND IT WON'T WORK".

Well folks I hope this is the last time I hear that. But before I get on to what this is all about let me tell you how the Newsletter program listings are put to paper.

In the beginning I simply used LLIST to list a program onto the master sheets for the off-set printer. This works OK until you get some graphic character in the listing. When this happens my printer will print something but NOT what was intended.

This problem we suffered with until by newsletter 1 - 12 the programs were becomming more complex and more graphic characters were appearing. This made typing in of programs on your end very difficult.

So what could I do? My poor JP-80 Printer never heard of Spectravideo Graphic Characters, let alone know how to print them. This is where a bit of programming came in and I wrote a program to list programs. To put it simply my program prints a program normally until it finds a Graphic Character, it then switches the printer to Graphic Mode and sends out the correct BIT pattern until what you see on paper is the same as what you see on the monitor. Well anyway it worked and you have seen the results for the past few Newsletters.

I thought that would fix the phone calls. (One of these days I will learn). So to plan B.

Let it be said that the programs printed in the newsletter are pretty well tested before hand and listed directly from DISK to PRINTER. So the system seems to be falling apart between posting the newsletter and saving the program on CASSETTE or DISK.

In an insane attempt to fix this I have now included a TWO digit Checksum system in the Newsletter programs. However this is not as simple as you may think. For it to work you must use the following program when typing listings from the Newsletter. I have kept the INPUT program as simple as possible. But remember nothing is fool proof and although the program is designed to stop typing errors, if you put yourself out you can fool the program. So use it as it is intended and you should have no more problems in typing programs.

### HOW IT WORKS

If you decide to use the following program you must keep in mind how it works.

```
CG      5 PRINT "TEST"
```

In the above example you see the Checksum at the Beginning of the program line (CG). This Checksum will always be in the range AA to ZZ. If you want to find out how it is calculated look at line 300. The

# SPECTRAVIDEO™

AUSTRALASIAN USERS GROUP

program uses this Checksum to see if you have typed the program line in correctly. If not the program line won't be allowed and you must edit it in the normal manner. If you have correctly typed the line it is not entered into memory but saved to CASSETTE or DISK in ASCII format.

The program ignores spaces, that is PRINT"A" and PRINT "A" are the same. However PRINT and PIRNT will be noticed and not allowed. So the best I can say, experiment before you tackle something bigger.

Don't forget the file you have created on CASSETTE or DISK is an ASCII file and must be LOADED and then RE-SAVED. If a program is too large to type in in one sitting, just type END and then restart later with a different FILE NAME. To put it all in together at the end when you create the full program just use the MERGE command. If you have a DISK system you might like to change line 130 from OUTPUT to APPEND. (this won't work with cassette.)

So happy programming and I hope this system will fix all those typing mistakes.

If anyone has problems with the INPUT (God forbid) send a CASSETTE and return POSTAGE to the LIBRARY and we will send you the listing.

If you are confident with your typing and do not want to use the INPUT program you can still type in the Program Listing normally by ignoring the Checksum.

"Oh-Oh... the plug came out."

## PROGRAM INPUT

by : P.W. Deckert.

```
10 CLS
20 PRINT " S.A.U.G. Program Input System."
30 PRINT " -----"
40 CLEAR 1000
50 DEFINT A-Z
60 INPUT "SCREEN WIDTH";U
70 WIDTH U
80 SCREEN,0
90 PRINT : PRINT
100 INPUT "WHAT IS THE PROGRAM NAME";A$
110 INPUT "SAVE TO CASS OR DISK (C/D)";B$
120 IF B$="C" OR B$="c" THEN B$="" ELSE B$="1:"
130 OPEN B$+A$ FOR OUTPUT AS #1
140 PRINT : PRINT
150 PRINT "REMEMBER THAT ALL 'SPACES' ARE IGNORED"
160 PRINT "TYPE 'END' WHEN FINISHED."
170 PRINT
180 PRINT "*";
190 LINE INPUT A$
200 IF A$="" THEN BEEP : GOTO 180
210 F=0:I1=1
220 IF A$="END" OR A$="end" GOTO 380
230 B=ASC(LEFT$(A$,1)):B1=ASC(MID$(A$,2,1))
240 FOR I=3 TO LEN(A$)
250 C=ASC(MID$(A$,I,1))
260 IF C=32 THEN 290
270 IF I1/2=I1\2 THEN F=F+C ELSE F=F-C
280 I1=I1+1
290 NEXT I
300 F=ABS(F) MOD 256:F1=F\16+65:F2=F MOD 16+65
310 IF B=F1 AND B1=F2 GOTO 360
320 BEEP
330 FOR I=1 TO LEN(A$)\U+1
340 PRINT CHR$(30);
350 NEXT : GOTO 180
360 PRINT #1,RIGHT$(A$,LEN(A$)-2)
370 GOTO 180
380 CLOSE
390 CLS
400 PRINT:PRINT
410 PRINT "YOUR PROGRAM IS NOW STORED IN ASCII"
420 PRINT "FORMAT. LOAD IS FROM DISK OR TAPE AND"
430 PRINT "RE-SAVE IT IN A COMPACT FORM. SAVE FOR"
440 PRINT "DISK AND CSAVE FOR CASSETTE."
450 PRINT : PRINT
460 END

CG      5 PRINT "TEST"
DN      10 PRINT "12345"
END
```

Try the above two lines to make sure all is working OK before you tackle something bigger.

## MODIFICATIONS TO THE EXPANDER

by Nick Booth, Sydney

I read with interest our Editor's article in the July Newsletter about his experience in fitting a reset button into his Expander. Over the past few months, I have fitted some other unauthorised bits into my Expander, and I thought these might be of interest.

My modifications started when I bought a green screen monitor, to prevent squabbles about the relative importance of television programmes and computing. The picture was beautifully clear but, like most monitors, there was no sound. Disaster. How can you tell it's a computer if it doesn't go BEEP? And my sons couldn't hear the sound effects in Spectron.

I did some investigating, and found that the Expander has a +12 volt line that runs only from the power supply to the disk drive slot. This line obviously provides the power to run the drives, and is therefore capable of supplying a reasonable amount of power.

I then bought and built a little 5W amplifier kit, available from Dick Smith (and other audio kit suppliers) for around \$8. This was attached to the lid of the Expander by a nut and bolts through a ventilation slot on the left side. Power was obtained by soldering wires to the +12V and 0V lines on the underside of the Expander's main board. Audio input was obtained by cutting the cable supplied to connect the SV to the tv modulator (audio is the yellow wire), and was fed in through a volume control (10k potentiometer) which was mounted at the left front of the Expander. Output went to one of a strip of four RCA sockets that was stuck across the leftmost (as viewed from the front) slot on the back of the Expander. I had on hand a small, but reasonable quality, loudspeaker and this was stuck under the computer desk to give the sound.

Incidentally, I would not recommend the use of the 12V lines at pins 3 and 4 of the Expander buss to run an amplifier. I suspect that they have insufficient power.

Two of the other RCA sockets were used to carry output from the tv modulator (which was glued into the Expander) and the video monitor output from the SV (the black wire in the modulator cable).

The next modification was made when I purchased the 80-column card. This expensive gizmo is almost essential if you want to do any word processing or other serious work under CP/M. (A spreadsheet looks very silly on a 40-column display!) The trouble is that a monitor plugged into the 80-column card will not display any 40-column material, including the graphics screens.

One could, of course, keep changing the monitor cable from one socket to another, but I don't fancy that as a permanent solution: cables come adrift if they are messed around with all the time. So I drilled a hole in the plastic cover that fits into the left slot on the front of the Expander, and fitted a small switch to select the 40-column and graphics output from the SV or the output from the 80-

# SPECTRAVIDEO™

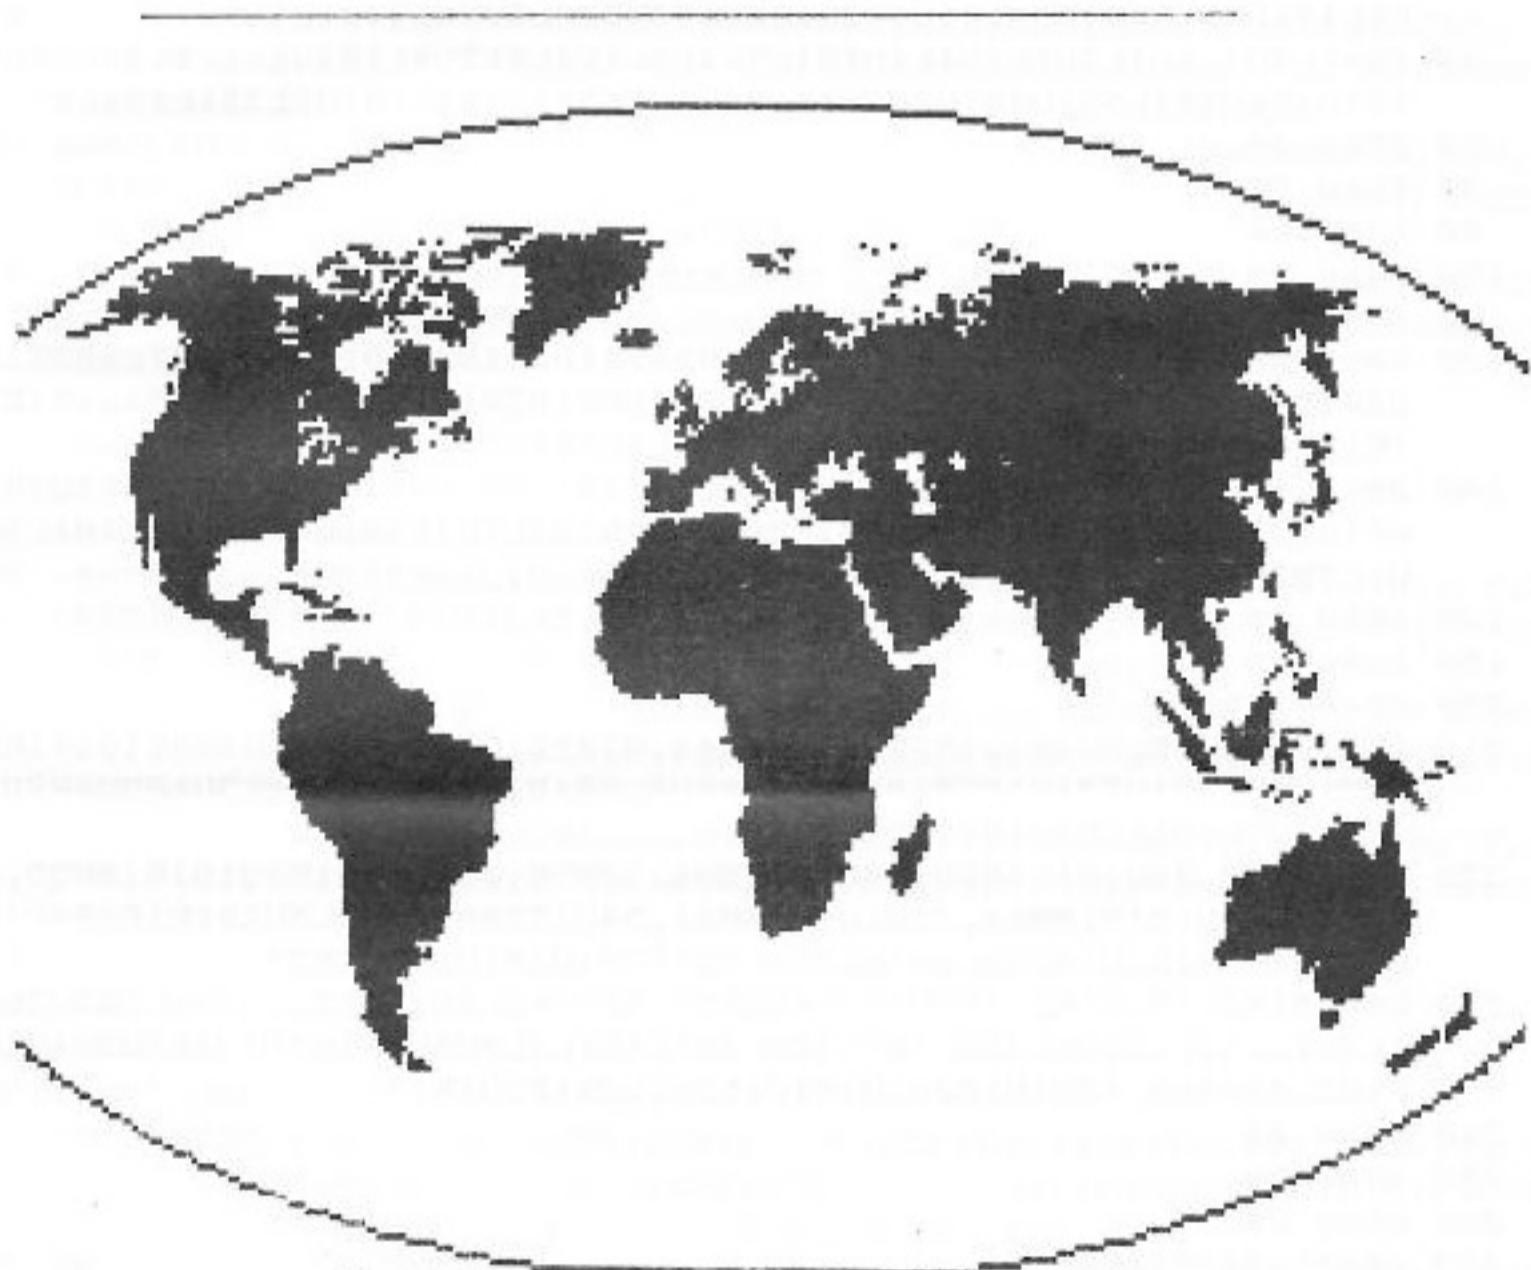

AUSTRALASIAN USERS GROUP

column card.

And I've now fitted a reset button into the same left plastic cover.

I would be happy to undertake these modifications for anyone who is interested and for whom Sydney is more convenient than Launceston. My address is in the June Newsletter. I would need to receive Expander, modulator and modulator cable. The cost would be \$10 for audio amplifier and \$2 each for 40/80 column switch or reset button; plus, in each case, the costs of return freight.

Next month: how to take a one-inch cold chisel to your SV and scare it into running dBase II properly.

## WORLD MAP

If you want to really show off the Spectravideo Graphics the following program will print a map of the World on your Screen. The diagram above shows what it looks like.

AUSTRALASIAN USERS GROUP

## HEX

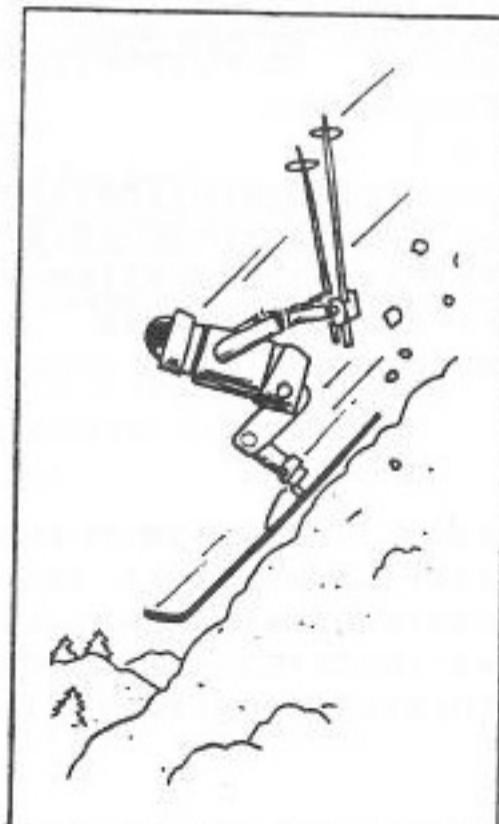

by Nick Booth, Sydney

This is a short program that I have found useful in designing sprites and redefining characters. It gives the decimal, binary and hexadecimal equivalents of numbers from 1 to 256 (decimal).

## HEX

by : N Booth

```
GG    10 X$=STRING$(5,"#")
DG    20 Y$=STRING$(12,"#")
AG    25 GOSUB 120
FA    30 FOR A=0 TO 256
HG    40 PRINT USING X$;A;
EO    50 C=VAL(BIN$(A))
HH    60 PRINT USING Y$;C;
AH    70 IF A<16 THEN PRINT SPACE$(7); ELSE PRINT SPACE$(6);
AO    80 PRINT HEX$(A)
GH    90 IF A<256 AND A>0 AND A/16=A\16 THEN GOSUB 120
CE    100 NEXT
AL    110 END
FL    120 PRINT : PRINT " Press any key to continue."
BH    130 IF INKEY$="" THEN 130
BN    140 CLS
BM    150 PRINT " DEC      BINARY      HEX" : PRINT
BL    160 RETURN
END
```
